

Where every 0.005 USDC goes

One paid call, from the agent's wallet to your bank. BotTrunk never holds the money: the transfer is a plain on-chain USDC payment from the payer straight to the gateway wallet. The Rails app only decides *whether* to do the work, and keeps the books.

The addresses

ROLE	ADDRESS	HOLDS
Gateway wallet — the payTo in every 402 receives all sales	UTWS33TM7IT7NINJSFWS5KVGL73G4ERJMYDKHF7KE4WDXHY04L7V2PNMRE	In Pera on your phone; 25 words in the password manager. Stable forever — the facilitator keys your reputation on it.
Payer wallet — the test agent spends	LQAWG3WUMKWTFGEFCC0ET6JGPRKD2JFYPIJ6HPIRYAC6QDUJSBDMCKPFQ	Generated on the Mac by bin/agent-wallet; key in gateway/.env.local. Moves money with bin/pay and bin/send. In real life the payer is any agent's own wallet — never yours.
Second wallet — funding / bank tops up the payer	ABEAGNREVBDSINTS0WXYX0ANZDRTLBDWGULA3SALTWRMXNEED2LWZNSADE	In Defly on your phone. Holds the TestNet faucet USDC and whatever you park for tests; sends to the payer with an ordinary Defly transfer.
Facilitator fee payer — GoPlausible pays ALGO fees	ZMFK20I7ZBD2U27ISERZC4S6LKM6WMFJPZQ4MYNJDZ2VNBNMBA67RA22AA	Co-signs and pays the network fee so the agent spends USDC only. Never touches the USDC.

ROLE	ADDRESS	HOLDS
Seller wallets — later Phase 2	one per outside seller	When other people list services, their 85% is paid out from the gateway wallet by a payout job. Today the only seller is you.

One paid call

Steps 1–5 and 8 are HTTP; only step 6 touches the chain. If step 4 fails, the gateway never calls settle, so nothing is charged. If step 7 fails, the payer still gets a 200 — the money already moved, so bookkeeping must never block the response.

Getting it to your bank

1. In Pera (MainNet), send USDC from the gateway wallet to your exchange's deposit address, choosing the **Algorand** network for USDC.
2. Sell USDC for USD (or use the exchange's P2P market).
3. Withdraw to your bank.

Sweep regularly instead of letting it pile up: the phone key is fine for cents per call, not for a large idle balance. The receiving address itself never changes.

Per call, at today's price

Agent pays	5 000 μUSDC	\$0.005
Network fee	0.001 ALGO	paid by facilitator (gasless) or by the payer
Lands in gateway wallet	5 000 μUSDC	100 %, on-chain
Ledger: BotTrunk commission	750 μUSDC	15 %
Ledger: seller share	4 250 μUSDC	85 % — also you, until outside sellers exist
